8.0 Canter

8.0 Elasticity

8.0 Athleticism

9.0 Jumping Technique

9.5 Jumping Scope

9.0 Jumping Reflexes

9.0 Balance

7.5 Rideability

Comments: Imnotafraid Fortuna is a rectangular stallion with a sloping croup and neck that is somewhat ewe-shaped. His front and hind legs are correct except there is swelling in the hock that produced a low score for his hindlegs. However WSI's Veterinary Committee judged the swelling to be cosmetic and of no clinical significance for the stallion's breeding and sport careers. Both Imnotafraid Fortuna and his dam, Debutante Fortuna, passed the DNA-OC test for osteochondrosis and his second dam was awarded the PROK honorific from the KWPN for having good x-rays. Imnotafraid Fortuna's canter is functional with a long stride, good suppleness, and very good balance. He jumps very well and with exceptional scope.

Breeding Recommendation: Imnotafraid Fortuna will suit many mares that lack power and scope in their movement and jumping ability.

Semen: Imnotafraid Fortuna's semen is available from Jonathan Flynn (086.366.5010).
