STAGE 2

DNA-OC BV: 101 WFFS1: N/N CLINICAL: *EXCELLENT RADIOGRAPHS: *EXCELLENT AIRWAY: *EXCELLENT CEM/EVA/EIA: NEGATIVE

Predicates: D-OC, D-WFFS1, E+

Stable Behavior: Good stable behaviour. No stable vices observed.

Behavior with Humans: Good behaviour with humans.

Additional Observations by the Inspectors: The stallion is a very nice type for both breeding and sport careers. He is long-lined and has a sufficiently rectangular frame with a strong topline. His front and hind legs are correct. His walk is correct and has improved very significantly since the Stage 1 inspection. His trot is active with normal length of stride, elasticity, lightness, and impulsion, and it has improved significantly since Stage 1. The canter has a good length of stride but can sometimes be a little heavy; it has improved since Stage 1, and the canter is expected to continue improving with further training and development. In general, the stallion is well-balanced and relaxed as he works, is very cooperative with the rider, appears to be highly trainable, and is showing good potential under saddle. His pedigree and damline are very interesting for dressage breeding. The stallion has two siblings that are approved stallions, including the half-brother KWPN Approved Stallion King van het Haarbosch and the full-brother ISR Approved Stallion Moscow AF. The stallion's dam is a half-sibling to two Grand Prix dressage horses, and one approved stallion. The KWPN awarded many predicates to the stallion's first three dams. As a sire, we believe he can bring good movement and correct conformation to his progeny, along with good interior qualities and rideability.

*Interior: character/temperament + willingness to work, equally weighted

*Excellent, Good, or Acceptable

Decision: APPROVED
