STAGE 2

DNA-OC BV: 100 WFFS1: N/N CLINICAL: *EXCELLENT RADIOGRAPHS: *EXCELLENT AIRWAY: *GOOD CEM/EVA/EIA: NEGATIVE

Predicates: D-OC, D-WFFS1, E+. BWP Approved 2023.

Stable Behavior: Good stable behaviour. No stable vices observed.

Behavior with Humans: Good behaviour with humans.

Additional Observations by the Inspectors: A modern, sufficiently rectangular type with nice expression that is built slightly downhill at this point in his growth and maturation. His neck is slightly long. The shape of the croup is normal; the length is a little long. The front legs are dry, and a little back at the knee and tied-in, and he toes-in particularly on the left fore. The hind legs are angled correctly but he is a little cow-hocked. He has good feet. His walk and trot are sufficient, but he needs more shoulder freedom. The use of his hind leg is sufficient-to-good in these gaits. He has good posture in the trot and canter. His canter is light-footed and balanced, and he is easy to ride and always cooperative with the rider. The canter has a good length of stride, and with balance and normal impulsion. He jumps carefully and has good scope. When jumping, he has a quick take-off. Sometimes he jumps a little forward. At times he has inconsistent technique in the front, but is always good behind. Sometimes he should make a better shape over the jump. The pedigree and damline are good. The second dam has half-sisters that have produced several 1.60 m. jumpers; the third dam has a half-brother that is a 1.60 m. jumper and approved stallion. As a sire, he should suit a wide variety of mares including both modern and a bit more old-fashioned warmblood showjumping-bred mares. For eventing breeding, he should suit mares with high thoroughbred genetics, including true half-bred mares. He is expected to contribute a good mind, a highly functional canter with high rideability, and desirable jumping traits to both jumping and eventing progeny.
